*Versa+ only

Expanding the Boundaries of Electronic Magnifiers

The SmartView Versa redefines the handheld electronic magnifier. Available in two models, the Versa and the Versa+. Both have a 4.3 inch color LCD display, magnification up to 15X, and multiple high contrast modes. The Versa+ also supports the ability to save images, listen to music and watch videos; features beyond any electronic magnifier on the market.

At home

- Verify medication labels
- Work on your favorite crosswords
- Save frequently used phone numbers
- Listen to your favorite music
- Use your TV for extra large viewing

At work

- Scan reports
- View function keys on your phone
- Record voice notes
- Write messages for colleagues

At school

- Study using normal text books
- Write tests and exams
- Listen to music on the bus
- Watch your favorite movie
- Keep important references as saved images

Adapts to your needs

The Versa is fully configurable to your requirements. Change the contrast mode and magnification to best match your vision. The autofocus lets you hold the Versa at the optimal distance from the object and your eyes. Rest the Versa on the page, use the writing stand or flip out the handle for optimal viewing.

Not just a magnifier

The SmartView Versa+ uniquely combines the traditional electronic magnifier with the features of MP3 and video players. Why carry two or more devices when all these functions are in the Versa+. Standard SD memory cards let you travel with all the music and videos you want.

Convenient size and weight

The Versa's wide screen lets you get the big picture yet it weighs only 7oz (200g). Never a burden to carry around.

More than a handheld

Easily connect the Versa to any TV with the included video cable to significantly increase your magnification and use all the features of the Versa. No need for another TV magnifier when you have a SmartView Versa.

Beyond the frozen image

The Versa lets you freeze an image and then save it in internal memory or on the SD card. Saved images can be transferred to your computer. Change the magnification and contrast mode when viewing saved images. Even pan around to see the whole image.
